

K2 TiltUp Vento System

Many different module arrangements as well as 3 different elevation angles (20°, 25°, 30°) are possible. Due to the flexible connection via ballasting with concrete foundation or as direct connection with concrete anchors, it can be mounted on many roofs.

System-Highlights

Different roof connections

- Ballasted with concrete foundation
- Direct connection with concrete anchors possible

Different module designs

- Portrait/landscape mounting possible with the same components
- Clamping on the short or long module side

3 different inclination angles

- All module arrangements available in 3 inclination angles: 20°, 25° and 30°
- Component connections are the same throughout

Few components

- Sophisticated system with well thought-out connections with few components
- Enabling systemic storage
